

## Delivery Options

### **Option One: Through the corporate LMS or Intranet**

EdistaLearning courses can be delivered to organizations irrespective of whether they have their own LMS or not.

**Organizations having an LMS:** The LMS available in an organization can be either SCORM compatible or non-SCORM compatible.

**SCORM complaint LMS:** In case an organization has a SCORM compatible LMS, EdistaLearning will help in plugging the course in the corporate LMS. All EdistaLearning courses are designed in a way that they can be plugged in with all SCORM compatible LMS easily without much tweaking.

**Non-SCORM LMS:** In case an organization has an LMS that is not SCORM compatible, EdistaLearning will provide non-SCORM compatible courses. For such courses, there will not be any provision of tracking the progress of users as can be done through the LMS. However, in such a case the progress trackers built in the courses will work.

**Organizations without an LMS:** EdistaLearning can assist an organization which does not have its own LMS and deliver courses based on whether they are interested in acquiring an LMS or not.

**Keen on acquiring an LMS:** In case an organization is keen on acquiring an LMS, EdistaLearning can help the organization by recommending vendors. The courses can be delivered depending on the compatibility (SCORM or non SCORM) of the acquired LMS.

**Not keen on acquiring an LMS:** In case an organization is not keen on acquiring an LMS, EdistaLearning can deliver courses in a form that can be run on the corporate Intranet.

### **Option Two: Through the EdistaLearning LMS**

In case an organization does not want to run EdistaLearning courses from its own LMS or Intranet, it can access them through the EdistaLearning LMS hosted on the Internet. The EdistaLearning LMS has features such as discussion board and chat, tracking and reporting, and performance and competency management.

Note: EdistaLearning will provide answers to all technical queries regarding the EdistaLearning courses. This does not include installation and hosting support and troubleshooting in the organization's server environment (organization's LMS or Intranet). EdistaLearning will answer technical and customer queries on all business days during working hours.

### **Option Three: Blended Learning Programs**

The EdistaLearning courses can be plugged into an organization's instructor led program.

Skill building trainings or knowledge-building introductory-level programs can be used with the instructor led trainings to make them more complete. This makes these trainings easy to track, thereby increasing the uniformity and effectiveness of the programs.

## **Option Four: Course Customization**

EdistaLearning courses share real-life data, examples, and scenarios on various aspects for organizations that want the learners to see what their organization does in those areas.

EdistaLearning aspires to reduce the time gap between learning and application to the minimum. The learners should be able to relate their learning to their existing role in particular and to the organization as a whole. Incorporating organization-specific standards, templates, and policies at relevant places in the course will help learners associate better.

Customization will help in adding references that will facilitate the learners in:

- Reducing the time-lag between learning and real-life application
- Relating the learning to their roles
- Understanding the processes and standards in an organization more closely.
